A single point of contact for all your needs

5...4...3...2...1 BLAST OFF!!

This month heralds the launch of the new Orange Group's website www.orangegroup.co.uk. Whilst the old site has served us over the years, we know all too well that customers and potential customers need to refer to the website to glean specific information quickly and easily.

We have spent time on the design to make it user friendly. We have spent time on the content to make it interesting, informative and succinct.

Browse the site to find out:

- The way we do business
- The services we provide
- Case Studies
- Accreditations
- Contact details

Contact us to find out how to turn the content of the website into a working partnership

May The Force Be With You! Orange strikes back with their Light Savers!

Always keen to promote innovative ideas that save you energy, money and reduce your CO2 emissions, Orange has carried out trials on a microprocessor controlled energy saving unit for use with fluorescent and discharge lighting.

Benefits include:

- Saves up to 30% on power consumption
- Lamp life extended by approximately 25%
- Generates no harmonics
- Can be installed within existing buildings
- No disruption to working environment
- Light fittings do not require modification
- Aids ISO 14001 compliance
- Reduces cost of Climate Change Levy
- 2 years warranty

If you want to reduce your energy costs with savings going straight to the "bottom line", then call Orange NOW on 0870 417 8000

Case Study

Service: Power Load Control
Client: Blue Chip company in Hampshire

Controlling the Power

Power is nothing without Control.

That was the challenge faced by Orange in supporting one of its long-standing 'blue chip' customers. The site is already served by two generators which provide backup to the entire building and it's these generators which had to be configured in such a way that when 'standby' power was required it was 'phased' in under control and through a set sequence of priorities. The 'Harmonisation' and 'Power Sharing' of the two generators became critical. The generators had

to deliver immediate power but in a controlled manner to avoid 'tripping' of equipment and stalling of the generators.

Recognising and understanding the problem, Orange worked with specialists in installing a bespoke panel and Power Load Control (PLC) System which enabled the two independent generators to work as one. This tailor made solution and modification simultaneously controls and manages the various building services as they came on line preventing the complete loss of power.

The successful completion and ongoing works will give the customer further confidence in Orange Group's ability and dedication to this vital area.

R22

New regulations came into effect on 4th July 2007 regarding stationary refrigeration, air conditioning and heat pumps.

These units need to be checked for leaks by certified personnel:

- annually with 3kg or more F gases
- every six months with 30kg or more F gases
- every 3 months with 300kg or more F gases (this is halved once leakage detection systems are installed)

You have an obligation to:

- prevent leakage and repair any leaks as quickly as possible. A further check must be made one month after the repair to ensure the repair was effective.
- Arrange proper refrigerant recovery by certified personnel
- Maintain records of refrigerants and servicing

Don't let this legislation become a burden. The Orange Group can take this task on for you either as part of a Planned Preventative Maintenance schedule or as a stand alone contract. Call 0870 417 800 for more details.

10 Year's Service

Lee Williams, a mobile Engineer with Orange has just celebrated 10 year's service with the Company. Lee is seen with Ops Manager Tony Tickner receiving a certificate and celebratory bonus in recognition of this milestone.

Employee of the Quarter

The Orange Group is dedicated to providing a premier service and we know this can only be achieved if each employee feels that the extra effort they put in not only makes a difference but is recognised by the Company.

It's always tough to single out an individual so last quarter we didn't! Instead, we singled out TWO people who made a BIG difference, John Lochrie and Terry Cissel. This quarter, Terry O'Hara who is based in Manchester, has been singled out for the award.

All three members of the Orange Team have made an outstanding contribution to the business by going that extra mile, giving much more than 100%, and by doing more than can be expected.

Well done guys you're a hard act to follow.

In Safe Hands...

The Orange Group has been in existence for over 20 years and has a business portfolio that includes Clients from those early years. Like every business, Orange looks for future growth so Client retention AND new business is vital.

We would like to welcome our recent contract Clients:
